

# Evidence-to-Proposal

Patrimonio Vivo Conservación · Consultant: Gretel Ceballos · Client: Ugo Ahukannah

## THE PROBLEM

Patrimonio Vivo already owns the knowledge it needs, but past reports, project history and supporting evidence are difficult to find, validate and reuse when a new restoration proposal arrives.

Client evidence: 35–60 internal hours per complex proposal · 12-day median turnaround · 45–90 min to retrieve a comparable case.

## RECOMMENDATION

- Create an internal Evidence-to-Proposal workflow.
- Build validated Case Cards for recent projects.
- Use semantic search to find comparable cases by meaning.
- Assemble source-backed evidence packs before drafting.

## WHY IT FITS

- Targets the confirmed bottleneck: search, validation and rewriting.
- Uses knowledge Patrimonio Vivo already owns.
- Can start with a bounded corpus rather than a system replacement.
- Supports faster proposals without automating restoration.

## HUMAN CONTROL

- AI assists with search, metadata, matching and evidence assembly.
- Conservators retain diagnosis, treatment and material decisions.
- Authenticity, valuation, legal approvals and final sign-off stay human.
- Every assisted output must link back to source evidence.

## FOCUSED PILOT

Madrid · projects since 2022 · paintings, altarpieces and polychrome wood · approximately 40–60 well-documented cases.

## ASK / NEXT STEP

Approve a focused pilot to test whether Patrimonio Vivo can reduce proposal turnaround from 12 to 7 working days without reducing technical quality or professional control.
